INTRODUCTION

THIS book is intended to be used as a companion to a text-book of geography. It is strictly a Canadian Atlas, every map having been specially drawn for illustrating or elucidating those geographical facts or ideas which should be assimilated by pupils in Canadian schools.

In the maps illustrating the geography of Canada colour is largely used to show differences of altitude, while other geographical features are emphasised which are of scientific or commercial importance, so that the book is not a mere record of topography. The utmost care has been taken to avoid overcrowding of names and so to make each map as clear and readable as possible.

This Atlas was prepared to form a working companion to the author's *Canadian School Geography*. It represents an endeavour to meet the practical need for an atlas quite separate from the geographical text-book and so to render the concurrent study of letterpress and map less irksome and inconvenient.

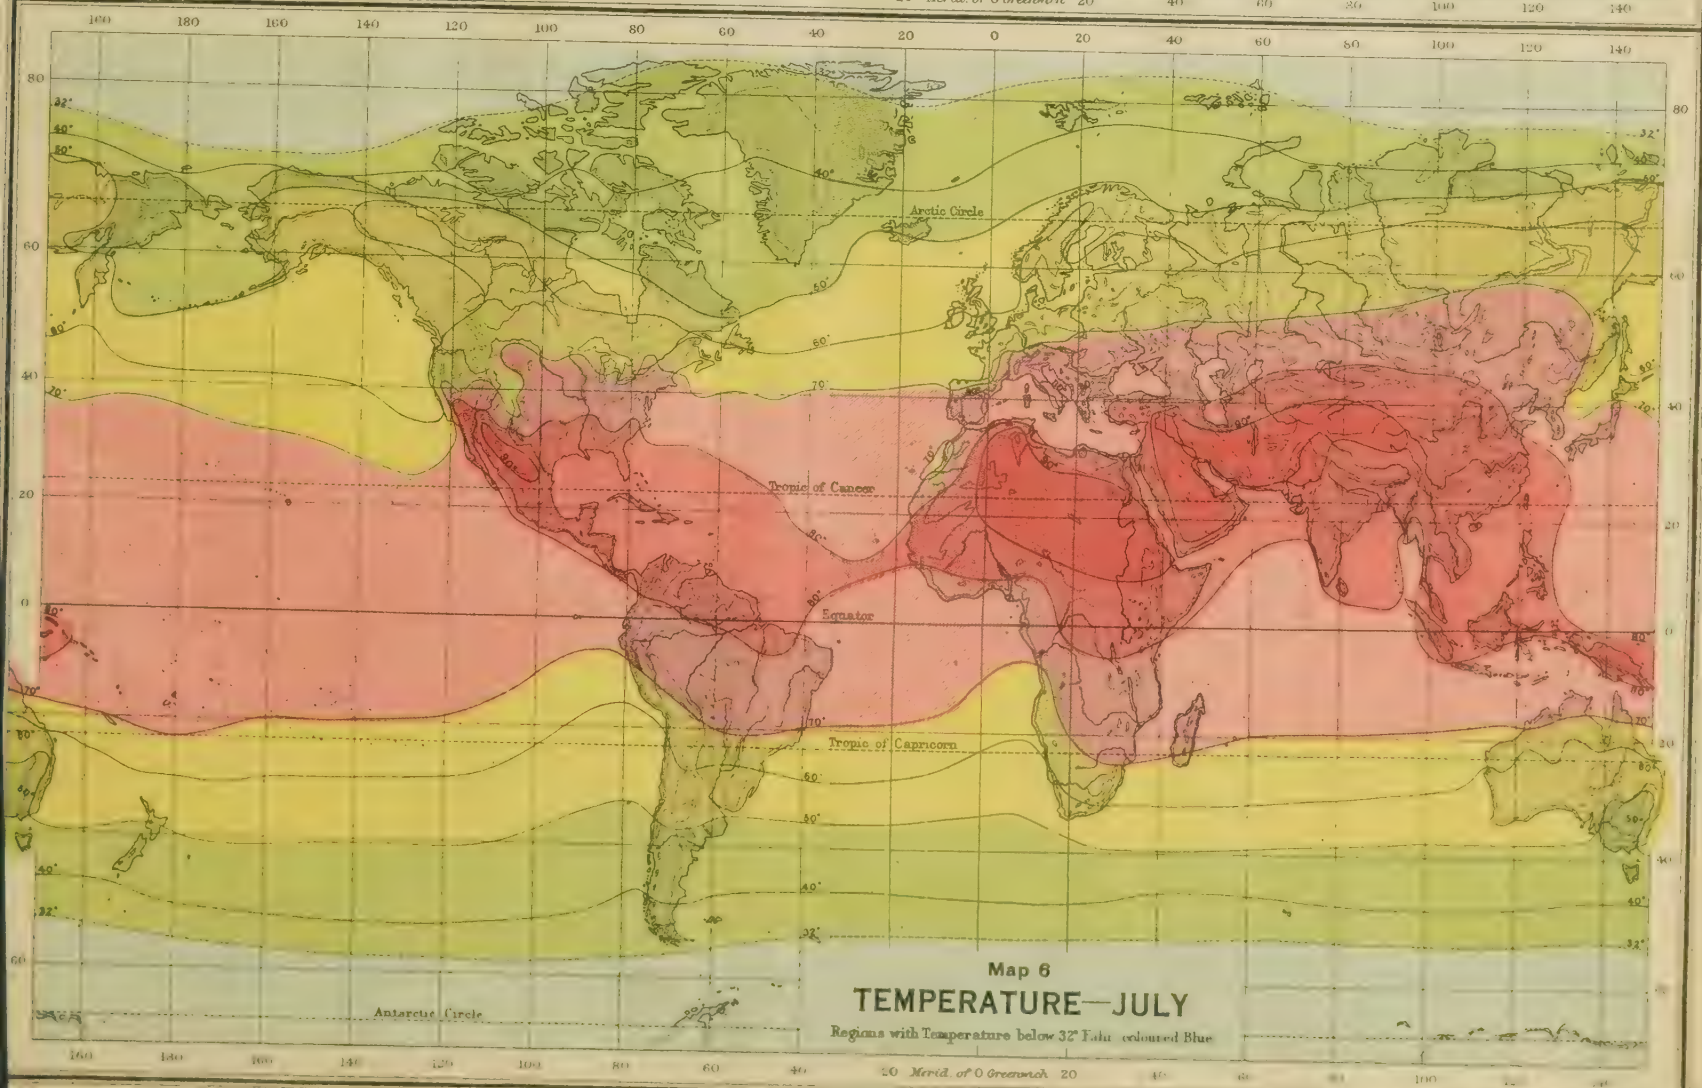

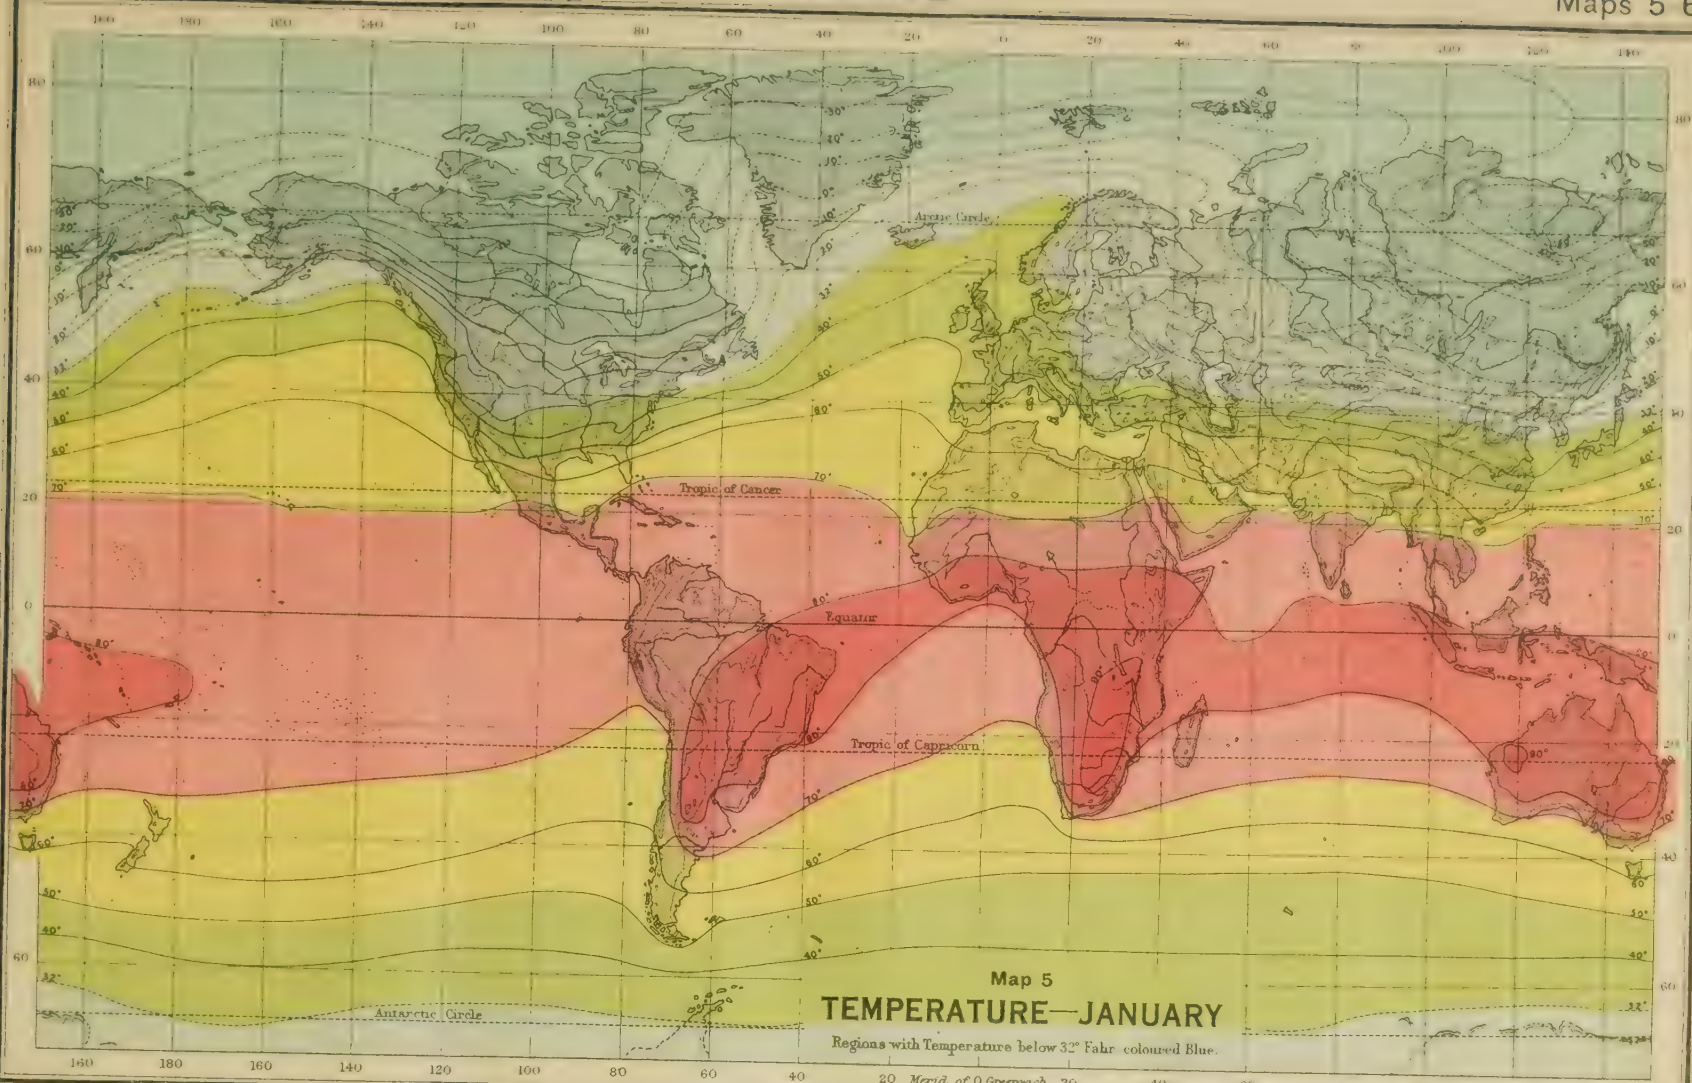

Map 2

The comparative shipping on the principal world routes is shown by the widths of the lines

Note to Ocean Currents

Warm Currents

Cold Currents

The direction of the Currents is shown by the arrows.
 The feathers of the arrows indicate by the number of strokes the mean speed of the water drift in an hour.
 The thick strokes above indicate the number of nautical miles.
 The thin strokes below indicate the number of quarters of a mile thus, — 1 mile — 2 miles — 3 miles
 — 1½ — 2½ — 3½

Note to Monsoon Drifts

In the Indian Ocean, the China Sea, and the West Coast of Mexico and Central America, the Currents change with the Monsoons.
 The simple arrows — show the S.W. and S.E. Monsoon Drift during the Northern Summer. The arrows marked thus — show the N.W. and N.E. Monsoon Drift during the Northern Winter.
